PROJECT EXPERIENCE

Interactive Comment Section — *React.js*
A comment section application that allows a user to create a basic profile to use to reply to and upvote/downvote existing comments as well as create, edit and delete their own in the same space. Uses a combination of Express, MongoDB and GraphQL to store and retrieve users and comments.

Todo List App — *React.js*
A traditional todo list app that allows a user to add, delete, or mark complete individual tasks, as well as filter the tasks shown. Also allows a user to toggle between a light and dark display mode. GitHub / Live Site

Time Tracking Dashboard — *React.js*
Displays the time a user has spent on specified activities, and allows a user to toggle between daily, weekly and monthly totals. (Data currently pulled from a local JSON file) GitHub / Live Site

Company Landing Page — *HTML5/Sass/JS*
A landing page for a fictional company that showcases a responsive dropdown navigation bar. GitHub / Live Site

Advice Generator App — *React.js*
A small web app that generates and displays a random piece of advice from the Advice Slip API. GitHub / Live Site

WORK EXPERIENCE

Manager, Mark's Pizzeria
12/2018 - 04/2021
- Coordinated teams of up to 12 employees to keep processes running efficiently.
